

Peer Feedback for the Student Research Lead (retired this edition, kept on file)

HONR 46400 · Evidence-Driven Research

⚠ Retired for the Fall 2026 edition: kept for a future one

The Student Research Lead role does not run this semester, so nothing in this document is required of you. Every Monday and Wednesday lecture from Week 2 now opens with a ten-minute **Lab Meeting** instead. One of you is that lecture's **reporter**: you take **seven minutes on a decision from your own project and the evidence behind it**, then **three minutes of questions from the room**. You do not teach the lecture's concept, and **your report is not graded**. The instructor leads from minute 10 and owns accuracy, the AI tooling and the clock.

The 25% **Student Research Lead** grade category retired with the role. In its place, **Lecture Notebooks (20%)** collects the notebook you work in class, once a week. Everyone hands one in, not only the reporter, and it is graded on completion alone.

Nothing below has been removed. This document is kept whole for a future edition that reinstates the role. Where a procedure would mislead you today, it carries a 🚫 **Retired procedure** note naming what happens instead. (*Ruling: [_project_docs/DECISIONS.md](#), D74, 2026-08-31.*)

🚫 **This form is not collected in Fall 2026.** Reports are ungraded, and the feedback happens live: the three minutes of questions after each report are where a classmate finds out what landed and what did not. The four prompts below are still a good private checklist for the question you ask in those three minutes, and the form is kept whole for a future edition that reinstates the role.

You fill this out for whoever led today. It takes under three minutes, and it is the fastest way your classmate gets better before their next slot. Be specific and be kind. Point at moments, not personalities. "Your question about the control group made me rethink my answer" helps; "good job" does not.

Today's lead: Your name: Session (Monday investigation / Wednesday lab):

1. One thing that worked

A specific strength. What did the lead do that you want to steal for your own slot?

2. One Socratic question that landed

Quote or paraphrase the single question that actually made the room think or changed your mind.

3. One moment the AI got interrogated well

Where did the lead push on an AI answer instead of accepting it? A source checked, a confident claim questioned, a missing uncertainty caught. If it did not happen, say "did not see one": that is useful too.

4. One suggestion for next time

The single most useful change. Frame it as a next step, not a complaint. "Give us five more seconds to commit before opening the AI" is perfect.

Hand this to the lead, or drop it where the instructor collects them. Your classmate reads every one before their next lead.
